Innovative, new technology is available that could revolutionize how fires are fought and prevent the catastrophic loss of property seen over the past several years!

DakotaFire's "Pressurized Gel Delivery System" allows firefighters to coat a 2500 sf. structure in approximately 15 minutes with fire retardant gel. This powerful system has been field tested in over 20 Type I and II fires across the western United States and has saved well in excess of 200 Homes.
